

ROBERT GREGG

Front End Web Designer/Software Engineer

I have a passion for coding and have enjoyed working on a wide range of projects. My past experience is mainly in front end development however I enjoy learning the new skills required in every project. I enjoy both being a part of a synergistic team and/or working alone.

I also have 15 years of experience in many other areas of business: marketing, communications, customer service, content creation, graphics design/video production/podcast production and more.

EXPERIENCE

OCT 2019 - OCT 2020

Junior Software Developer

SWITCHPLANE

- Agile/Scrum
- CSS3
- Javascript
- Sourcetree
- PHP
- HTML

Building widgets/additional functionality on client sites / house projects, landing pages, website revamps, fixing bugs.

MAR 2019 - SEPT 2020

Web Designer

THE LITTLE DESIGN GROUP

- Wordpress
- HTML
- CSS

Customizing client websites, often with awkward 3rd party apps, working to very tight deadlines under pressure.

“Judgements don’t stick because I’m forever evolving”

SKILLS IN DEPTH

I started my journey back in 2004 building HTML and CSS websites for our business. Then along came wordpress and I used themes and customized them. In the last few years my focus has been learning how to code properly and a few years back I started my journey with Javascript.

I worked for a company in a junior role for 1 year and was I made redundant because of covid. Since then I have been working on my personal portfolio website, and actively increasing the number of projects and skills.

Competent in building anything that I need to and sticking to more modern principles where possible. I don’t claim to know all, but I have never not accomplished a task.

Much experience with customizing with HTML and CSS. Have connected many apps for big projects including membership sites with payment processing, ESPs etc

Created graphics for our businesses. Use regularly to manipulate images, shapes and text. Created many flyers, posters, logos etc

Basic understanding. In a previous job a typical task would be to create a landing page slider widget in HTML, CSS. Then add functionality in Javascript, and then build out the page in PHP

Competent in styling elements / adding transitions. Have some experience with modern techniques like variables, animations, SCSS and would learn more if needed. A good understanding of BEM.

Confident at manipulating the DOM. Good understanding of the basics. Have used REST APIs for some of the beginner apps which are on my site. This is my current focus of my skill building.

Have created movies/clips/trailers for online video courses, dance school show, home videos etc which were exported to youtube, vimeo, and DVD.

At university we did a module on MYSQL, creating Entity relationship diagrams, building databases and performing queries. This was quite a while ago but I do have some understanding that could be built upon if needed.

The items to the left are ones that I have a basic understanding of, and that are currently in my project todo list, in the order that you see here. One project I am doing next involves several.

For the right employer I am happy to substitute any languages for ones that would help my skills in my future job role.
