# ROBERT GREGG

Frontend Software/Web Developer

I have a passion for coding and have enjoyed working on a wide range of projects. My past experience is mainly in front end development however I enjoy learning the new skills required in every project. I enjoy both being a part of a synergistic team and/or working alone.

Problem Solving	

SKILLS IN DEPTH

I started my journey back in 2010 building HTML and CSS websites for our businesses In recent years my focus has been building on my passion for Frontend development with Javascript, Node.js, React and other frame works/libraries. I would like a role where I can use my skills but also be able to grow and learn new languages / frameworks / techniques.

JS JAVASCRIPT

Built websites / apps using the latest javascript ES6 techniques. Proficient in DOM manipulation, OOP / functional programming approaches, REST Api's.

REACT

Built websites / web apps using classes/functional components, hooks, custom hooks, userState, useEffext, useContext etc

CSS3

Proficient in basic - advanced techniques including variables, animations, transitions, SCSS, LESS,

HTML

Proficient in basic - advanced techniques. No tables unless absolutely necessary!

WORDPRESS

Connected plugins/customized to create complex websites and customized with HTML and CSS.

PHP

Basic knowledge and used in previous job role to build out web pages in PHP

💡 At the time of writing I have built 4 full stack apps with React, which is my current language of focus. The apps use MongoDb and Firebase (NoSql). I consider myself a frontend developer as I enjoy it the most, however I enjoy all aspects of fullstack development
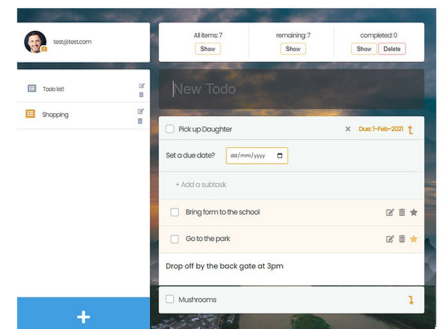

EXAMPLE PROJECTS (Taken from my portfolio site)
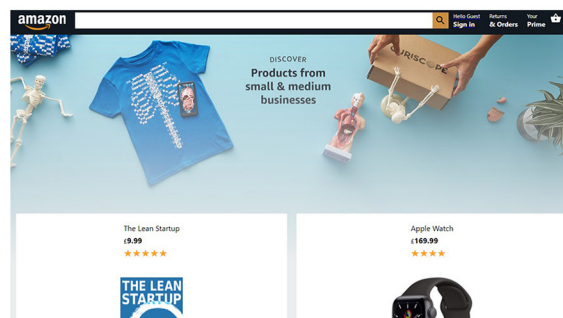

TODO APP (HTML, CSS, Vanilla JS)

Features:
Multiple todo lists, todo items, subtasks, due dates, add a note, view all/remaining/completed, delete, reorder drag and drop, edit, favorite, create account, upload profile pic, mobile responsive.
