ROBERT GREGG

Front End Web Designer/Software Engineer

I have a passion for coding and have enjoyed working on a wide range of projects. My past experience is mainly in front end development however I enjoy learning the new skills required in every project. I enjoy both being a part of a synergistic team and/or working alone.

I also have 15 years of experience in many other areas of business: marketing, communications, customer service, content creation, graphics design/video production/podcast production and more.

SKILLS IN DEPTH

I started my journey back in 2004 building HTML and CSS websites for our business. Then along came wordpress and I used themes and customized them. In the last few years my focus has been learning how to code properly and a few years back I started my journey with Javascript.

I have a passion for Frontend development withg my current focus being building my skills in Javascript, Node, React and other frame works. I would like a role where I can use my skills but also be able to grow and learn new languages. I a have a lot to bring to the table including my experience from running my own businesses for over 15 years.

HTML
Competent in building anything that I need to and sticking to more modern principles where possible. I don't claim to know all, but I have never not accomplished a task.

CSS3
Competent in styling elements / adding transitions. Have some experience with modern techniques like variables, animations, SCSS and would learn more if needed. A good understanding of BEM.

REACT
Have built websites and apps using React, classes, components, hooks. APps include Youtube clone and a Whatsapp clone using Socket.io. These can be seen on my website

JAVASCRIPT
Built websites and apps using latest javascript ES6 techniques. Confident at manipulating the DOM. Confident about classes and OOP approaches as well as functional programming aproaches.

PHOTOSHOP
Created graphics for our businesses. Use regularly to manipulate images, shapes and text. Created many flyers, posters, logos etc

PREMIER PRO
Have created movies/clips/trailers for online video courses, dance school show, home videos etc which were exported to youtube, vimeo, and DVD.

PHP
Basic understanding. In a previous job a typical task would be to create a landing page slider widget in HTML, CSS. Then add functionality in Javascript, and then build out the page in PHP

WORDPRESS
Much experience with customizing with HTML and CSS. Have connected many apps for big projects including membership sites with payment processing, Email Service Providers etc

NODE

GRAPHQL

ANGULAR

TYPESCRIPT

MONGODB

The items to the left are ones that I have a basic understanding of, and that are currently in my project todo list, in the order that you see here. One project I am doing next involves several.

For the right employer I am happy to substitute any languages for ones that would help my skills in my future job role.
